

On the occasion of the launch of *Picturing*, the first volume of the Terra Foundation Essays, a new publication series exploring themes of critical importance to the history of arts and visual culture of the United States, the Deutsches Forum für Kunstgeschichte Paris, and the Terra Foundation for American Art are jointly organizing a conference to further the transatlantic dialogue about what pictures are and what they do.

This conference invites speakers to reflect on the differences and convergences between the intellectual traditions of visual studies and Bildwissenschaft. Are there ways to think about pictures anew by bringing these models more closely together? Does the move away from visuality towards the material offer possibilities for overcoming early differences between these two approaches?

Kindly supported by the Université Paris 7 Diderot
